
GEO DIY Playbook

Step-by-Step: How to Actually Do It Yourself
Tools, Click-by-Click Instructions, Templates

No theory. Just actions.

August 2026

Module 1: Check If AI Already Knows You

Time: 30 minutes. **Cost:** Free.

Step 1: Open ChatGPT, Perplexity, Gemini, and Claude in 4 browser tabs.

Step 2: Type this exact prompt in each: *"What is [your business name] and what does it do?"*

Step 3: Write down what each AI says. Does it know you? Is the info correct? Does it cite your website?

Step 4: Now type: *"Best [your service] in [your city]"* — e.g. "Best electrician in Zurich." Do you appear?

Step 5: Save all 8 responses in a Google Sheet. Label: Correct / Wrong / Missing.

Tip: If the AI says "I don't have information about..." — you are invisible. This is your starting point.

Module 2: Fix Your Website So AI Can Read It

Time: 2-4 hours. **Cost:** Free.

2.1 Add the Magic Code (Schema.org)

Schema markup is invisible code that tells AI exactly what your business is. Without it, AI guesses. With it, AI knows.

Step 1: Copy this code. Replace everything in [brackets] with your real info.

```

<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "LocalBusiness",
  "name": "[Your Business Name]",
  "description": "[One clear sentence: What you do, for whom, since when]",
  "url": "https://[your-website].ch",
  "telephone": "[+41-XX-XXX-XX-XX]",
  "email": "[email@yourbusiness.ch]",
  "foundingDate": "[YYYY]",
  "address": {
    "@type": "PostalAddress",
    "streetAddress": "[Street Number]",
    "addressLocality": "[City]",
    "postalCode": "[XXXX]",
    "addressCountry": "CH"
  },
  "geo": {
    "@type": "GeoCoordinates",
    "latitude": "[XX.XXXX]",
    "longitude": "[X.XXXX]"
  },
  "sameAs": [
    "[Your Google Business Profile URL]",
    "[Your LinkedIn page]",
    "[Your Facebook page]",
    "[Your Curaviva/Industry profile if exists]"
  ]
}
</script>

```

Step 2: Find your latitude/longitude: go to google.com/maps, right-click your building, copy the numbers.

Step 3: Paste this code into the <head> section of your homepage. If you use WordPress, install the "Schema & Structured Data" plugin and paste it there.

Step 4: Test it: go to validator.schema.org, paste your website URL, click Run Test. Green checkmarks = good. Red = fix.

2.2 Rewrite Your Homepage (Answer-First Method)

AI does not read your whole page. It grabs the first sentence of each section. So write those sentences as direct answers.

Wrong: "Welcome to our website. We are a family-owned company dedicated to excellence since..." — AI ignores this.

Right: "Meyer Elektro AG is an electrical contractor in Zurich specializing in residential wiring, smart home installation, and 24-hour emergency repairs since 2005." — AI copies this into answers.

Step 1: Open your homepage. Find the first paragraph.

Step 2: Rewrite it as: *[Business Name] is a [service type] in [city] specializing in [3 specific services] since [year].*

Step 3: Do this for every page. Services page, About page, Contact page.

Step 4: Add specific numbers: "We serve 500+ homes per year," "Our team of 12 certified electricians," "Average response time: 45 minutes."

2.3 Create an FAQ Page (3.2x More AI Citations)

Step 1: Write 15-20 questions your customers actually ask. Not marketing fluff. Real questions.

Q: How much does an electrical safety inspection cost in Zurich?

A: An electrical safety inspection (NIV / NIN inspection) in Zurich typically costs between CHF 250 and CHF 450 for a standard residential property up to 150m². Larger properties or commercial buildings require a custom quote. Contact us at +41 44 XXX XX XX for a precise estimate.

Q: Do you offer 24-hour emergency electrical service?

A: Yes. Meyer Elektro AG provides 24-hour emergency electrical repairs across Zurich and surrounding areas. Our average response time is 45 minutes. Call our emergency hotline: +41 44 XXX XX XX.

Step 2: Each answer must contain: a specific number, a city name, a phone number, and a time frame.

Step 3: Add FAQPage schema. Use the Schema validator to test.

Step 4: Publish the page. URL should be: yoursite.ch/faq or yoursite.ch/haeufige-fragen

Module 3: Create Your Entity Everywhere

Time: 3-4 hours. **Cost:** Free.

AI cross-references facts about you across the internet. The more places your name appears with the same address, phone, and description, the more AI trusts you.

3.1 Google Business Profile (Do This First)

Step 1: Go to business.google.com. Sign in with a Google account.

Step 2: Search for your business. If it exists, claim it. If not, create it.

Step 3: Fill out EVERY field: Business name (exact, no extra keywords), Category (primary + 9 secondary), Address, Phone, Website, Hours (including holidays), Description (750 characters, include services, city, years in business), Services (add all 20-30 services you offer), Photos (add 20+ real photos: storefront, team, work examples), Products (if applicable), Q&A (add 5-10 common questions and answer them yourself).

Step 4: Request verification (Google sends a postcard with a code to your address).

Step 5: Post weekly updates (offers, new projects, team news). Respond to every review within 24 hours.

3.2 Get Listed on Swiss Directories

These are the directories AI checks for Swiss businesses:

Free directories (must-do):

- [local.ch](https://www.local.ch) — Create/update listing. Exact same name, address, phone as your website.
- [search.ch](https://www.search.ch) — Same as above. Same NAP everywhere.
- Google Business Profile (already done above).
- Apple Business Connect (mapsconnect.apple.com) — Free, takes 10 minutes.
- Bing Places (bingplaces.com) — Free, imports from GBP.

Industry-specific (if applicable):

- Curaviva.ch — For elderly care facilities.
- fmh.ch — For doctors.
- home.ch / immoscout24.ch — For real estate.
- handwerk.ch / craftsman directories — For tradespeople.

Critical: Your Name, Address, and Phone (NAP) must be IDENTICAL across every listing. "Meyer Elektro AG" on one site and "Meyer Elektro" on another confuses AI.

3.3 Create a Wikidata Entry (Advanced but Powerful)

Step 1: Go to wikidata.org. Create an account.

Step 2: Click "Create a new item." Enter your business name.

Step 3: Add these properties:

- instance of: business enterprise (Q4830453) or local business
- country: Switzerland (Q39)
- official website: [yoursite.ch](#)
- street address: your full address
- phone number: +41 XX XXX XX XX
- email address: your email
- founding date: YYYY-MM-DD
- industry: your industry (search Wikidata for the right code)

Step 4: Save. Note your QID (looks like Q123456789). Add this QID to your website's sameAs schema.

Why this matters: Wikipedia and Wikidata are the #1 source ChatGPT cites. Having a Wikidata entry makes you "real" in AI's eyes.

Module 4: Get Mentioned on the Web

Time: Ongoing (2-3 hours/week). **Cost:** Free to low.

AI learns about you from mentions across the internet. Every mention on a credible site increases your "entity authority."

4.1 Reddit (Perplexity's #1 Source)

Step 1: Create a Reddit account. Do NOT use your business name as username (looks spammy).

Step 2: Find relevant subreddits: r/Switzerland, r/Zurich, r/Bern, r/AskSwitzerland, r/DIY, r/HomeImprovement.

Step 3: Search for questions related to your service. E.g. "electrician zurich recommendation."

Step 4: Write genuinely helpful answers. Only mention your business if it's truly relevant. Example: "I work as an electrician in Zurich. For NIN inspections, expect CHF 250-450. Happy to answer specific questions if helpful."

Step 5: Do this 2-3 times per week. Build karma first by commenting on unrelated posts.

4.2 Quora

Step 1: Go to quora.com. Search for your service + Switzerland or your city.

Step 2: Answer 3-5 questions per week. Be detailed. Include specific prices, timeframes, and local context.

Step 3: In your Quora bio, add your business name and website. Every answer you write links to your bio.

4.3 Guest Posts and Local Media

Step 1: Write a 500-word article: "5 Things Every Zurich Homeowner Should Know About Electrical Safety."

Step 2: Email it to: local newspapers (Berner Zeitung, Tages-Anzeiger, 20 Minuten), industry blogs, and community websites.

Step 3: Include a short bio: "John Meyer is the founder of Meyer Elektro AG, a Zurich-based electrical contractor with 15 years of experience."

Step 4: One guest post per month is enough. Quality over quantity.

4.4 Reviews (Google, Facebook, Industry Sites)

Step 1: After every completed job, send a review request via SMS/WhatsApp: "Hi [Name], thank you for choosing us! Would you mind leaving a quick review? It helps other [city] residents find us: [Google review link]"

Step 2: Target 5-10 new reviews per month. Respond to every review personally.

Step 3: Reviews with specific details ("They installed 12 LED spots in our kitchen in 3 hours") help AI more than generic "Great service" reviews.

Module 5: Monitor Your Progress

Time: 15 minutes/week. **Cost:** Free.

5.1 The Simple Monitoring Method (Google Sheets)

Step 1: Create a Google Sheet with these columns:

Date	Prompt	ChatGPT (Y/N)	Perplexity (Y/N)	Gemini (Y/N)	Claude (Y/N)	Position	Notes
------	--------	---------------	------------------	--------------	--------------	----------	-------

Step 2: Every Monday, run these 6 prompts across all 4 AI engines:

1. "Best [your service] in [your city]"
2. "[Your business name] reviews"
3. "[Your service] [your city] prices"
4. "[Your business name] vs [competitor name]"
5. "[Your city] [your service] near me"
6. "Who is the best [your service] provider in [canton]"

Step 3: For each prompt, mark Y if your business is mentioned, N if not. Note the position (1st, 2nd, 3rd).

Step 4: After 4 weeks, calculate your citation rate: (Total Y's / Total possible) x 100.
Target: 50%+ within 90 days.

5.2 Automated Monitoring (Set Once, Run Forever)

Free option:

- Google Alerts ([google.com/alerts](https://www.google.com/alerts)) — Set alerts for your business name, your name, and "best [service] [city]."
- Google Business Profile Insights — Check weekly for "how customers found you."

Paid option (\$29-99/month):

- Otterly.ai — Tracks all 7 AI engines automatically. Shows citation trends.
- Peec AI — Tracks when AI "uses" vs "cites" your content.

Module 6: Build This as a Service for Clients

If you want to offer GEO as a service to Swiss businesses, here is the exact service package:

6.1 Service Tiers

Tier 1 - GEO Audit (CHF 500 one-time):

- Run 50 prompts across 4 AI engines.
- Score current visibility (0-100).
- Identify hallucinations and wrong facts.
- Competitor benchmark (3 competitors).
- Deliver: 10-page PDF report with action list.

Tier 2 - GEO Setup (CHF 2,500 one-time):

- Everything in Tier 1, plus:
- Schema.org markup implementation.
- Homepage rewrite (answer-first structure).
- FAQ page creation (20 questions + schema).
- Google Business Profile optimization.
- 5 directory submissions (local.ch, search.ch, etc.).
- robots.txt + llms.txt deployment.

Tier 3 - GEO Management (CHF 800/month):

- Everything in Tier 2, plus:
- Weekly AI monitoring across 4 engines.
- Monthly content update (1 blog post or FAQ addition).
- Review generation campaign (5-10 reviews/month).
- Competitor tracking and response.
- Monthly report with citation rate, SoV, and recommendations.

6.2 Client Onboarding Checklist

Week 1:

- Sign contract and collect access (website CMS, GBP login, social accounts).
- Run baseline audit (50 prompts, save all responses).
- Send audit report. Schedule kickoff call.

Week 2:

- Implement schema markup on website.
- Rewrite homepage and key pages.
- Create FAQ page.
- Optimize Google Business Profile.

Week 3:

- Submit to 5 Swiss directories.
- Create Wikidata entry.
- Deploy robots.txt and llms.txt.
- Start first guest post outreach.

Week 4:

- Run first re-audit. Compare to baseline.
- Send Week 4 progress report.
- Begin monthly monitoring cycle.

6.3 ROI Proof for Clients

Show clients these metrics monthly:

- **Citation Rate:** % of prompts where AI mentions them. Target: 50%+.
- **Share of Voice:** Their mentions / total competitor mentions. Target: top 3.
- **Hallucination Count:** Number of false facts AI says about them. Target: zero.
- **Review Growth:** New Google reviews per month. Target: 5-10.
- **Website Traffic from AI:** Use UTM tags to track clicks from AI citations.

Quick Reference: Checklist

Week 1 Checklist:

- Run AI visibility test (4 engines x 6 prompts = 24 tests)
- Add LocalBusiness schema to homepage
- Rewrite homepage first paragraph (answer-first)
- Claim/optimize Google Business Profile

Week 2 Checklist:

- Create FAQ page (15-20 questions + FAQPage schema)
- Submit to local.ch and search.ch
- Deploy robots.txt with AI crawler rules
- Create llms.txt

Week 3 Checklist:

- Create Wikidata entry
- Write first guest post
- Answer 3 questions on Reddit and Quora
- Request 5 Google reviews from past customers

Week 4 Checklist:

- Re-run AI visibility test
- Compare to Week 1 baseline
- Document results in Google Sheet
- Plan Month 2 content

That's it. Do these steps. Check them off. Repeat monthly.
